Ali Nesin
Do not use symbols like $\exists, \forall, \Rightarrow$. Make full and precise sentences.

1. Find $\lim _{n \rightarrow \infty} \frac{2 n-5}{3 n+4}$ and prove your result by using the definition of convergence.
2. Show that if $a_{n} \leq a_{n+1} \leq b_{n+1} \leq b_{n}$ for all $n$, then $\bigcap_{n \in N}\left[a_{n}, b_{n}\right]$ is a nonempty interval.
3. Let $x_{1}=1, x_{2}=2$ and $x_{n}=\left(x_{n-1}+x_{n-2}\right) / 2$ for $n>2$.

3a. Show that $1 \leq x_{n} \leq 2$ for all $n$.
3b. Show that $\left|x_{n}-x_{n+1}\right|=1 / 2^{n-1}$ for all $n$.
3c. Show that if $m>n$ then $\left|x_{n}-x_{m}\right|<1 / 2^{n-2}$ for all $n$.
3d. Show that $\left(x_{n}\right)_{n}$ is a Cauchy sequence.
3e. Find its limit.
4. We say that a sequence $\left(x_{n}\right)_{n}$ is contractive if there is a constant $c, 0<c<1$, such that $\left|x_{n+2}-x_{n+1}\right| \leq c\left|x_{n+1}-x_{n}\right|$ for all $n$. Show that every contractive sequence is convergent.
